HARRIS ENABLELOCATION

REAL-TIME WORKFORCE AND ASSET TRACKING

Harris EnableLocation gives Public Safety workers an up-to-the-moment picture of mobile personnel and vehicles for faster, more informed decisions. This IP-based solution is easy to install and use and adapts to changes in emergency situations as they happen.

EnableLocation builds on Avtec™ and Tallysman™ technologies to deliver Radio-over-IP connectivity through Harris P25 trunked networks. Automatic Vehicle Location data gives public safety personnel a current map view of all assets, plus tracking, reporting and recording of all GPS information. First responders can send and receive text and status messages and dispatcher capabilities are enhanced through voice encryption and emergency alert services.

Designed for ease of navigation, the EnableLocation web interface gives users a comprehensive operational picture virtually anywhere via a wide range of devices—from mobile phones and tablets to desktop computers. Reverse geocoding of GPS latitude/longitude coordinates into street addresses is also supported, reducing information complexity during report reviews.
